

NO-BURN SE, Inc. PRESENTS THE MOST ADVANCED SPRAY APPLIED **FIRE** RETARDANT TECHNOLOGY

NO-BURN[®] Fabric Fire Gard

“Interior furnishings are the number one contributing factor to the swift spread of fire”

No-Burn[®] Fabric Fire Gard

Interior furnishings are the number one contributing factor to the swift spread of fire and smoke within a home. In most cases, it is the toxic smoke that kills the occupants, not the fire itself. Interior furnishings also contribute to the phenomenon known as “flashover”, in which the air within a structure becomes superheated, causing everything within the vicinity of the fire to explode into flames. It is not survivable by occupants, and rarely by fully protected firefighters. NO-BURN[®] FABRIC FIRE GARD, a clear and odorless liquid, was developed to help alleviate this problem. This non-toxic, non-carcinogenic and environmentally safe fire retardant is applied directly to furniture fabrics and other interior furnishings. Not only can NO-BURN[®] FABRIC FIRE GARD slow down the fire, but in many cases it will not allow interior furnishings to catch fire.

No-Burn[®] Fabric Fire Gard Classifications:

- ICC ES Report 1838
- CLASS A
- ASTM E84-05
- UL 723
- NFPA 701
- Green Product Status
- Flame Spread = 0
- Smoke Developed = 15
- Neutral PH – Non-Corrosive
- Non-Toxic and Non-Carcinogenic

No-Burn[®] Fabric Fire Gard Applications:

- upholstery, bedding and mattresses
- carpets, drapes and curtains
- furnishings, tablecloths and potholders
- stuffed toys, crafts and holiday decorations
