GORDON HEMBREE
RED RIVER FIRE PROTECTION

RE: NO-BURN FIRE RETARDANT

Dear Mr. Hembree,

I would like to thank you for inviting me to the fire burn demonstration. I have been in the construction field for over 25 years and have never seen a demo quite like the one I saw there at the Shemans Fire Dept. training facility. To be quite honest about it, I was very impressed. I observed that the NO-BURN product did just what you said it would do. It stopped the raging fire in its tracks. What impressed me the most was when the fire kept going out in your treated house you decided to toss that cup of gasoline into the structure. I thought it was over, but to my surprise the fire went out after the fuel burnt away without burning the structure. I can clearly see how this product can give people extra time to react if they were to have a fire and possible save lives. I highly recommend this product for any home or business because I can see the value in a life saving product, such as yours, if and when a fire should occur. Thank you again for inviting me to this demonstration and allowing me to be a part.

Sincerely,

HENRY HOWARD
